Decision requested	Submission no
notification requirements results in a potential with those with genuine concerns	Subinission no
about the effect of a application being unable to express them.	
Delete approach taken in the Plan to managing activities through prescriptive	618/147, 619/96, 1285/23,
activity list and them deeming all activities outside of such lists to be non- complying. Replace with an effects based approach similar to the operative Plan.	1286/71, 2670/95, 2721/5
No increase in density in reticulated areas	753/29, 821/33, 836/19, 1190/27
Welcomes the intent to have less notified applications where issues are dealt with	821/39
via council and fixtures not the community board.	6 <u>1</u> 1/66
Give thought to requiring the planting and establishment of more mature	897/5, 2772/5
specimens of large-growing tree species, possibly as a trade-off when making	
decisions on discretionary items.	051/1
Total ban on outdoor patio heaters That a practical study be undertaken of Great Barrier living conditions, with	951/1 968/1
particular reference to domestic fuel and the lifecycle and growth habits of	300/1
manuka/kanuka and that relevant sections of the Plan be rewritten to accurately	
reflect the results of this research.	
The proposed Plan provisions should be more focussed on an effects based	1101/10, 1287/1, 1288/1, 1289/15
planning regime derived from an integrated catchment management structure. That alternative technology and other cultural approaches to sustainable	1136/1
management be actively promoted and positively discriminated for within the Plan	1130/1
by way of objectives, policies and rules.	
That in a proposed part 15 of the Plan, entitled "Sustainable Management	1182/2
Operational Methodologies" extensive operational methodologies be delineated	
which will mitigate the effects of Peak Oil upon every aspect of our lives and fossil	
fuel economy. That are of the systemable management appretional methodologies by the	1182/3
That one of the sustainable management operational methodologies be the immediate creation of the council and local "Peak Oil" Management committees	1102/3
responsible for researching "Peak Oil", its effects on us and the mitigation of	
these.	
That the Plan/council pave the way for new models of cooperative small-	1205/1
community living and collective voluntary simplicity by creating a "fast track"	
processing of the building consent applications for beneficial community development in both the public and private sector.	
That the Plan express councils hope that we can face the approaching challenges	1205/2
of energy adversity without competing over scarce resources by learning to live in	1200/2
an economy of mutual support	
That the Plan acknowledge that those who presently have low incomes and	1205/3
abilities to care for themselves may face much greater difficulties in facing energy adversity. That the Plan incorporate new models of community living which would	
support the disadvantaged in having their needs met by the local community.	
Remove the "prohibited activities" activity from the Plan, and change prohibited	1243/3
activities included therein to non-complying activities.	
Include objectives, policies and methods (rules and assessment criteria) that	1256/2
address housing affordability including but not necessarily limited to:	
a. a commitment by Auckland City to investigate opportunities and incentives for encouraging the market to provide a variety of housing types for all socio-	
economic groups with the Waiheke community (ie in accordance with	
Essentially Waiheke).	
b. a commitment by Auckland City to carry out a future district plan change,	
including necessary public consultation, that will give effect to the	
investigation. c. Implementing activity standards and development controls that minimise	
consent costs for appropriate development.	
Remove the limiting effect of the proposed Plan's resource consent requirements	1259/2
have on the development of the island's vacant residential land.	
Amendments, deletions and revisions are sought to Parts1-4 to provide a more	1288/2
integrated and coherent approach to sustainable use and development as	
required by the RM Act 1991. The Plan should mitigate the threat from wildfire by incorporating a mix of the	1467/2
strategies including: ensuring that there is adequate stored water on site for fire	
fighting purposes. A 22,000 litre tank is only just adequate to supply a family	
during the summer. To ensure adequate supply for fire suppression purposes	
during the driest time of the year (which is also when the fire risk is at its greatest)	
a bigger storage capacity would be required. It is also important that the supply tanks be at least 8 metres from the dwelling to minimise the exposure risk. The	
problem of water supply on Great Barrier Island is exacerbated by the fact that	
there are no mechanisms in place to purchase water. The amount of water	
storage required on site could feasibly be reduced by the installation of internal	
sprinkler systems within dwellings. This mechanism is used in the building code	
to allow for the reduction of other fire safety measures.	

Decision requested	Submission no
Decision requested References to the HGI Development Code (eg in clause 5.3.1) either need to be	1596/6
deleted entirely from the Plan or the HGI Development Code laid open for public	1000/0
scrutiny.	1500/7
The status of the HGI Development Code needs to be clarified	1596/7
The Plan should state specific objectives and rules regarding the environment of the Gulf.	1692/3
More clearly stated rules protecting beach areas from substantial developments	1730/10
eg apartments, hotels etc	
To refocus objectives, policies and rules in the Tryphena Region so that in 2008	2043/2
Station Rock Road (reserve, car, cycleway and walkway) is formed in conjunction	
with the targeted growth and development around the existing settled area of	
Tryphena both as an example both of a low impact, hybrid design approach for new roads and to confirm the council's continuing programme for legalising roads	
(with specific reference to the following clauses: 2.1; 2.2; 2.3.1; 2.4; 2.4.1; 2.5;	
2.5.2; 2.5.8; 3.2; 3.2.1; 3.2.2; 3.2.3; 3.2.4; 5.1; 5.3; 5.3.1; 10b.5.2; 10b.5.3;	
10b.5.6.2; Part 13; 13.1; 13.2; 13.2.4; 13.2.6; 13.3.3; 13.3.5)	
Redrafting of the Plan to meet the identified inadequacies (regarding the failure to	2656/1
properly give effect to the HGMPA 2000 and the lack of specific objectives, rules	
or provisions that clearly identify sustaining the life-supporting capacity of the	
environment of the Gulf and islands as their objective, purpose and desired raison d'etre). In particular the provision of clear specific statements demonstrating how	
the principles of sections 7 and 8 of the HGMPA will be accorded the appropriate	
significance in terms of policies, consent conditions and enforcement	
mechanisms.	
Seeks a less dictatorial style of plan implementation.	2714/5
To avoid arbitrary and unlawful practices and formulations which are endemic in a	2766/9
hyper-regulatory environment, each and every list of rules and criteria must be	
reviewed and audited so that :	
 It is transparent whether such criteria are to be interpreted cumulatively or alternately (using "and" or "or" where appropriate). 	
Any bias, weighting or loading is made explicit and clear	
Where appropriate and necessary, any rule is given an explicit value or	
percentage	
4. Any such weightings must be based on the agreed social, economic and	
cultural priorities of the parties most affected by the rules or criteria	
In-house policies, practices and conventions which are not explicit in the rules and therefore are unlawful, are to be expressly forbidden	
The Plan fails to recognise the diversity of its people and communities to the	2766/16
extent that land uses are prescribed in a series of activity tables, which appear to	
make all unlisted activities non-complying or illegal, contrary to LGA section	
14.1(c).1. The council must make an effort to identify and include the actual	
pattern of development and preserve the flexibility and diversity of use within the	
land units wherever practicable. Include other relevant criteria in the Plan (with specific reference to recreation 3)	2908/6
to reflect that potential effects should be assessed upon sites within catchments	2300/0
(rather than just adjacent sites) and based upon a permitted baseline.	
That the Plan be reassessed and objectives, policies, rules and assessment	2942/1
criteria be developed to recognise and provide for and implement the threshold	
limits arising from that inquiry and to set and maintain the upper limit on	
development that it is determined can be accommodated in the islands of the Gulf. Change the Plan (particularly at parts 1, 2, 3, 4, 7, 10a, 10b, 10c, 11, 12, 13 and	
14) to implement the reassessed thresholds.	
Waiheke is unique. The rules of Auckland city do not apply here.	2998/5
Clearer definition of the extent of the coastal environment.	3078/1
Seeks that the Plan reflects the wishes of private property owners rights to	3089/3
designate conservation areas through covenants or reserve requirements	040444
Opposes any onerous conditions or rules in the Plan relating to roading on Great	3104/11
Barrier. That the use of "adjacent sites" be replaced by, "any exposed property ",	3177/1
throughout the Plan.	J177/1
The introduction into the Plan of appropriate to Waiheke landscape protection and	3400/3
enhancement methodologies	
All issues to be linked with a new additional sustainable management part of the	3400/4
Plan.	0.55.440
Wishes to see provisions in the Plan which will retain rather than detract from the	3574/2
intrinsic value of the Hauraki Gulf islands, in terms of conservation of the natural form, protection of vegetation, wetlands, coastal form, ecology and habitat of	
wildlife, and amenity value.	
Location of building sites must be carefully managed to avoid rather than mitigate	3574/4
the cumulative effects of that development on the environment and ecology of the	

Decision requested	Submission no
particular area, and the wider island region.	
Within the text of the proposed Plan there is various use of the terms "sensitive"	3574/8
and "significant" in reference to land features and landform, and other	307 113
environmental features, and impacts on these. The terms "sensitive" and	
"significant" need to be clearly defined so that use of these terms in the Plan has a	
consistent message.	
Provide a greater control in the Plan over the effects of greatly increased tourist	3695/6
flows on Great Barrier, particularly as regards public access information, removal	
of fences and other obstructions from the council - controlled legal roads, and	
mitigation of potential and actual damage to rare native flora and fauna, and to	
private land.	
The formulation of Objectives, Rules and Policies to provide protections for the	3702/1
islands ecology and communities from the trends of globalization eg population	
increase and mobility, peak oil, sea level rise, global warming.	
Include a new part 15: Sustainable management Issues and Methodologies:	3715/26
This new part 15 - a more coherent and holistic focus - would assume a new and	
novel multilayered coherent strategy and would include, among other issues, good	
science analysis protocols, the adoption of better planning tools to facilitate	
pragmatic ongoing sustainable management goals and associated community and	
educational goals, and more devolved governance. eg -	
Integrated wastewaters and waters and catchment management	
Catchments as management zones to enable integrated management	
Minimum water use strategies	
Rigorous cost benefit alternatives analysis protocols	
Enhanced coastal landscape and wetlands and biodiversity management	
Adaption management for climate change	
Support for enhanced energy management protocols	
Support for solar heating, windfarms electricity generation, park & ride	
The adoption of a Waiheke Island Gulf Design Panel	
The adoption of "sustainability design codes" and "community scale design	
codes" and "community amenity management codes".	
Public health benefits management (eg from a greater emphasis upon Public a and application)	
walking and cycling)	
Support for cost competitive video uplinking capacity broadband internet, to analyze and to control and to footby island appropriate.	
enable less need to commute and to foster island employment	
Support for community sustainability and education initiatives such as "Maiorea". Environmental "Bookbare", evaluation plubs, wallstyness forms and	
"Waicare", Enviroschools, "Beachcare", cycling clubs, walkways, fauna and flora enhancement, Waiheke Waste Resources Trust, heritage protection,	
and associated social, economic and cultural community well-being issues.	
 Recognition that Sustainability is a Community and Governance Issue 	
Include compensatory principles and mechanisms in the Plan to off-set the	3787/3, 3790/3, 3793/3
regulatory regime where owners rights are curtailed, severely restricted or	070773, 379073, 379373
extinguished.	
Include compensatory mechanisms within the definitions of landforms 1 (coastal	3787/5, 3790/5, 3793/5
cliffs and slopes), 2 (dune systems and sand flats), and 4 (wetland systems), and	2.22, 2.20.0, 2.20.0
within landforms 6 (regenerating slopes) and 7 (forest and bush), and where any	
changes have been introduced to previous land use definitions.	

Note:

• Submission 1192/1 removed from further processing as submission 1192 found to be a duplicate of submission 2735 which has been addressed in miscellaneous submissions. There were no further submissions to either submission.
